StreamCut Pro User Guide

User Guide · Version 3.0

Document ID	XYZ-SCP-UG-3.0	Version	3.0
Document Type	User Guide	Approval Status	Approved
Owner	M. Alders, Product Documentation Lead	Department	Product Engineering — Media Tools
Audience	End User	Compliance Classification	Internal Use Only
Last Updated	June 2, 2025	Applies To	StreamCut Pro Desktop & Cloud 3.0.x (Windows/macOS/Web)
Taxonomy Tags	video-editing; ai-captioning; cloud-collaboration; gpu-render; template-marketplace	Keywords	AI captions, translation, cloud sync, real-time collaboration, 4K, 8K, GPU export, template marketplace

Summary

This guide documents StreamCut Pro 3.0, which adds AI-driven auto-captioning and translation, cloud project sync with real-time multi-user collaboration, GPU-accelerated 4K/8K export, and an in-app template marketplace. This release marks StreamCut Pro's transition from a purely local desktop tool to a hybrid desktop-and-cloud product.

Table of Contents

12. Revision History

What's New Since Version 2.0

StreamCut Pro 3.0 is the largest capability jump in the product's history, moving beyond local single-user editing to a connected, AI-assisted, collaborative workflow.

- **AI Auto-Captioning:** automatic speech-to-text caption generation in 12 languages, with one-click translation.
- **Cloud Project Sync:** projects are stored in XYZ Cloud and can be opened from any licensed machine.
- **Real-Time Collaboration:** multiple editors can work in the same project simultaneously, similar to a shared document.
- **GPU-accelerated export** up to 8K resolution, using the render farm described in the companion SOP.
- **Template Marketplace:** a library of pre-built title, transition, and color templates, both XYZ-authored and community-submitted.

System Requirements and Setup

Cloud features require an active XYZ Cloud subscription tied to your corporate account and a stable internet connection of at least 10 Mbps upload for real-time collaboration. Local editing performance requirements are unchanged from 2.0.

AI Auto-Captioning and Translation

Auto-captioning uses XYZ's speech recognition service to generate a caption track directly on the timeline, which can then be edited like any other clip.

1. Select Captions > Auto-Generate on the sequence you want captioned.
2. Choose the source language; StreamCut Pro will detect it automatically if left blank.
3. Review and correct the generated captions in the Caption Editor panel.
4. Optionally select Captions > Translate and choose one or more of the 12 supported target languages to generate additional caption tracks.

Cloud Sync and Real-Time Collaboration

Cloud Sync stores the project file and a proxy copy of media in XYZ Cloud, while full-resolution source media remains referenced from each collaborator's local or shared storage.

- Enable File > Cloud Sync to publish a project for shared access.
- Invite collaborators by XYZ account email; permissions can be set to Editor or Viewer.
- Simultaneous edits to different tracks merge automatically; edits to the same clip are queued and flagged for the second editor to review.

GPU-Accelerated High-Resolution Export

Export now offers 4K and 8K options that route through GPU acceleration, either locally on a supported workstation GPU or via the cloud render farm for faster turnaround on large projects.

Resolution	Recommended Path	Typical Render Time (10 min sequence)
1080p	Local GPU or CPU	2-5 minutes
4K	Local GPU (8GB+ VRAM) or Cloud Render Farm	8-15 minutes
8K	Cloud Render Farm only	20-40 minutes

6. Using the Template Marketplace

The Template Marketplace, accessible from the Home screen, hosts titles, transitions, and color grading presets. XYZ-authored templates are marked Verified; community submissions display an author attribution and a peer rating.

- Browse or search the marketplace and click Apply to Project to import a template.
- Verified templates are covered by XYZ support; community templates are used at the editor's discretion.

Migrating from Version 2.0

2.0 projects open normally in 3.0 in local, non-synced mode. Enabling Cloud Sync on an existing project is optional and reversible; disabling sync retains a full local copy of the project as it stood at the time of the last sync.

Perspectives

Support Engineer Perspective

Support Engineers use this guide to diagnose issues and troubleshoot editor problems.

- Common scenarios: Unable to import (format incompat) → confirm MP4/MOV/WAV. Project corruption → advise local disk only. Export fails → check disk space $\geq 2 \times$ source size. Playback stutters → close other apps.

- Escalation: Crashes → Engineering + logs. Corruption → Data Recovery. Network issues → IT Service Desk.
- Limitations: v1.0 does NOT support: multi-track editing, color grading, GPU export, cloud collaboration, proxy media, formats beyond MP4.

Contact M. Alders (Prod Doc Lead) if you find doc gaps.

Technical Writer Perspective

Technical Writers maintain this guide.

- Standards: All steps verified in current product version. UI labels match live app. Screenshots refreshed when UI changes. External refs validated. Warnings reviewed quarterly.
- Version numbers: Major (1.0→2.0) = feature additions. Minor (1.0→1.1) = doc-only updates.
- Accessibility: H1→H2→H3 hierarchy. Descriptive table headers. Alt text for images. Test with screen reader.
- Contribution: Branch → Track Changes → Review → Update version → Deploy.

Contact M. Alders for approval.

Administrator Perspective

Administrators manage licensing, deployment, and team access.

- Licensing: Per-user licenses from Software Portal. Tied to SSO account (non-transferable). Use API for bulk deployment.
- Requirements: Min: Win10 64-bit/macOS11+, 8GB RAM, 4GB disk. Recommended: Win11/macOS12+, 16GB RAM, GPU 4GB+ VRAM. Reserve 20% free disk per machine.
- Config: MDM/GP not supported (per-device). Proxy auth supported (test pilot). No built-in telemetry.
- Upgrade: v1.0→v2.0 non-disruptive; new features opt-in. Plan 30+ days parallel support. Contacts: Install issues → IT Service Desk. Licensing → License Mgmt. Feedback → PM (stream-cut-pro-feedback@xyz.com).

Product Manager Perspective

StreamCut Pro v1.0 = entry-level editor for internal corporate use.

- Target: Employees with zero editing experience. Value: From raw footage to MP4 in minutes—no learning curve.
- Positioning: Simpler than DaVinci Resolve Free; cheaper than Adobe Premiere.

- Feature trade-offs: Single-track (reduces complexity; multi-track v2.0). MP4-only (universal format; presets v2.0). No color (lower curve; grading v2.0). No GPU (infra constraints; GPU+cloud v2.0+).
- Metrics to track: Activation rate (% completing first project in 30d; goal 60%). Completion rate (% reaching export; goal 75%). Support volume (categorize friction). Feature requests (log for roadmap).
- Pain points: Imports fail (no converter) → document tools. 4K slow (no proxy) → v2.0 fix. Disk errors (users don't plan) → auto-check v1.1. Network corruption (edit from shares) → v1.0 warning, v3.0 cloud sync solves.
- Roadmap: v2.0 multitrack/color/presets/GPU. v3.0 cloud sync/collab/AI captions/templates/render farm. 8. Warnings & Constraints

Warnings & Constraints

⚠️ Important Notices

- Real-time collaboration requires all participants to be on StreamCut Pro 3.0 or later; 2.0 and 1.0 clients cannot join a synced session.
- 8K export is only available via the Cloud Render Farm and consumes render-credit quota; see the SOP for quota and cost governance.
- Auto-generated captions are not guaranteed to meet accessibility compliance out of the box and must be reviewed before external publication — see Warnings in the companion SOP for QC requirements.
- Community-submitted marketplace templates are not security-scanned by XYZ Corporation beyond basic file-type validation; use Verified templates for client-facing deliverables where possible.
